Claim Rejections - 35 USC § 102

1. Claims 73-81,84-95 are rejected under 35 U.S.C. 102(b) as being anticipated by Tannenbaum (4,977,895).

Figures 3a-3c of Tannenbaum show the ability to change a parameter of the pulse stream in a variety of ways. Col. 2:60+ teach that pulse width and frequency are adjustable. Col. 5 teaches that various frequency modulation ranges can be used. The device of Tannenbaum is considered to be able to perform the various intended parameter variations set forth in the claims. Such terms in the claims as 'gradual' or 'sudden' are considered to be relative in nature, and thus are broad enough to be covered by the teachings of Tannenbaum.

2. Claims 73-95 are rejected under 35 U.S.C. 102(b) as being anticipated by Herbst (6,029,090).

Herbst is considered to encompass all of the subject matter of the above claims. As taught in the abstract, amplitude, frequency, pulse width , etc. can all be varied depending on the particular objective to be achieved. Further, various sensors can be used to detect various substances, some of which are indicative of muscle spasm or growth factors (col. 9:45+), and provide feedback to change the stimulation as necessary. Similar to the Tannenbaum patent, the Herbst device is considered to be able to perform all of the intended parameter variations set forth in applicant's claims.

Claim Rejections - 35 USC § 103

3. Claims 97-105,108-119,121-129,132-143 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tannenbaum (4,977,895).

The method steps of the above claims are considered to follow obviously from the normal workings of the

Tannenbaum device. That is, one of ordinary skill in the art would understand that various parameters can be adjusted to suit a variety of patient problems, and that some experimentation as to the proper frequencies, pulse width, timing, amplitude, etc. to use can be expected. Further, re claim 121, to use a support that is readable by a computer is considered to be well known in the art for the ease with which various programs can be changed and stored to fit the particular circumstances.

4. Claims 97-119,121-143 are rejected under 35 U.S.C. 103(a) as being unpatentable over Herbst (6,029,090). Herbst is considered to render the claims obvious for reasons similar to those set forth above.

Allowable Subject Matter

5. Claims 96,120,144 are objected to as being dependent upon a rejected base claim, but would be

allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
